

CHARON

PROTOCOL

MOVE MONEY. LEAVE NO TRACE.

PROGRESS REVIEW · WEEKS 1–2

THE PROBLEM

Solana is public.
Your money shouldn't be.

Every transfer is public — **amount, sender, receiver.** Forever.

Charon is a privacy layer for Solana. Deposit into a shielded pool, move funds with **zero-knowledge proofs** — the chain learns nothing.

A TRANSFER, TODAY	PUBLIC
from	7xKq…9dQf
to	4nVe…2pRh
amount	420.500000 SOL
history	"one search away"

THE SAME TRANSFER, ON CHARON	SHIELDED
publishes	1 zero-knowledge proof
shows	ownership — proven
reveals	nothing

WHAT WE'RE BUILDING — A privacy layer for Solana — **on-chain verifier, client-side proving SDK, keyless relayer.**

THE APPROACH

Heavy math, light footprint.

Proofs are heavy math. Charon keeps them light — **built on your device, small on the chain.**

01

Deposit

Funds become an **encrypted note** only you can read — the chain sees a commitment.

02

Prove

Your device builds a **zero-knowledge proof** of ownership — without revealing the note.

03

Vanish

The chain verifies and settles. **No sender, no receiver, no amount.**

BUILT FOR SOLANA

- **Proofs on-device.** The chain only verifies.
- **Any amount.** Two-in, two-out — no fixed denominations.
- **Cheap by design.** Fits Solana's compute budget.
- **Keyless relay.** Broadcasts for you, holds nothing.

SHIPPING STATUS

The stack is live, end to end.

Protocol

DONE

on-chain program

- ✓ **On-chain ZK verifier**
- ✓ **Commitment tree** — deposits hidden
- ✓ **SOL + SPL** tokens
- ✓ **Flexible amounts** — no fixed denominations

SDK

DONE

client-side proving

- ✓ **Proofs built on-device**
- ✓ **Wallet signs** — keys never leave
- ✓ **Browser + mobile**
- ✓ **Encrypted note store** — compressed

Backend

DONE

keyless relay + index

- ✓ **Keyless relayer**
- ✓ **Live private index**
- ✓ **Cloudflare Workers**
- ✓ **Fee delegation** — no gas needed

TWO WEEKS
OF PROGRESS

Week 1 sep 8 – 14

- ✓ **SPL transfers** — shield any token
- ✓ Encrypted outputs ~100 bytes smaller
- ✓ **CI gates** — program, model & circuit

Week 2 sep 15 – 27

- ✓ Backend rebuilt around notes
- ✓ **App v2 merged** — rebrand + SDK patch
- ✓ **One integration branch** — all layers unified

HOW A TRANSFER RUNS

BENCHMARKS

Shielded, and fast.

TOTAL WALL TIME

29.95 sec

the full pipeline, end to end
Groth16 proofs · proved on-device

TRANSFER TIME 2.48s	PROOF TIME 2.02s
TRANSFERS / TX 1	TRANSACTIONS 12
CU / TRANSFER 136.7k	FAILURES 0
PROGRAM SIZE 65 KB	TX SIZE 1,066 B
